

# **Compact Cash Drawer KA17**

The KA17 compact cash drawer from Wincor Nixdorf has been designed for installation immediately below the central unit of a POS system. Ease of operation coupled with security in retail applications were the principle factors governing the design of the product. The arrival of the KA17 has provided POS systems with a compact cash drawer which can also be used in international markets.

# **Functionality**

When POS activities are in progress, the compact drawer is opened by the POS system's software. In order to remove the cash compartment, the cash trough mounted on telescopic rails can be pulled out completely. At changes of shift, the compartment can be closed using a cover stored in the drawer, then removed by the staff. The two extra openings in the front panel of the drawer allow cheques, documents or credit notes to be inserted without the whole drawer having to be opened.

### **Security concepts**

The cash compartment adopts the role of a safe when removed from the drawer. This form of security enables staff to remove the locked compartment whenever the checkout desk is left unattended. Up to 30 different combinations are available for locking the compartment, thus complying with international security regulations.

### Connectivity

The compact cash drawer KA17 is connectable directly at the designated cash loading interface of the BEETLE computer family. It is also connectable to checkout printers with cash loading interfaces(RJ12).

# **Arrangement of compartments**

The cash compartments in the KA17 is divided into two units, one situated on

top of the other. The upper unit is divided crossways enabling it to be pushed backwards, thus exposing the lower unit. The front section of the upper unit contains a removable compartment which is divided into 8 cash compartments. The rear section provides 4 notes compartments for bank-notes stored lengthways. The lower unit provides enough space for storing large bank-notes and rolls of coins.

### **TECHNICAL DATA**

# **Environmental protection**

Active environmental protection is part and parcel of the Wincor Nixdorf philosophy. Our contribution in the case of the KA17 compact cash drawer consists of plastic housing components made out of environment-friendly material. These components are marked accordingly and are fully recyclable.
